

WITT-GAS FLASHBACK ARRESTOR TESTER

Flashbacks, dirt and external damage may affect the flow capacity and proper functioning of Flashback Arrestors and non-return valves. Annual testing of all safety elements is, therefore, imperative to avoid hazardous situations. Testing is done at our Unique Welding Boksburg Service Centre.

It can test the following:

1. Leak testing
2. Test of non-return valve against low and high back pressure
3. Operating pressure of pressure sensitive gas cut off valve
4. Measurement of flow capacity of flashback arrestors

Benefits:

- Money-saving - prevents replacement of the flashback each time
- Peace-of-mind safety testing
- Decreases the risk of operator injury
- Testing required by OSHA Standard No. 1915.55 (F) (5)
